- Markets

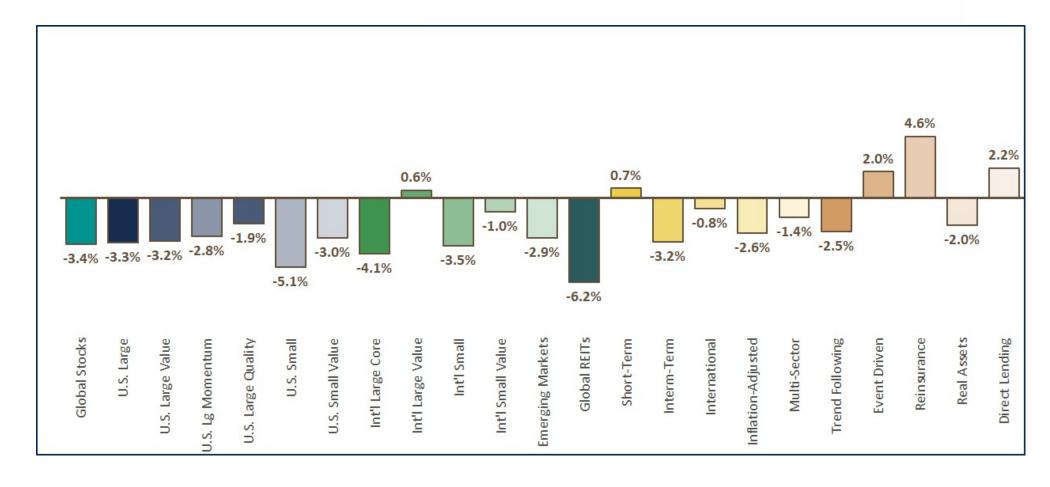

Quarterly Update

- Global markets cooled off in the third quarter after a strong first half of the year. Both stocks and bonds ended lower as the Federal Reserve's mention of keeping rates "higher for longer" weighed on markets.
- Most sector and style indices declined during the quarter. Exceptions were the energy and communication sectors and international large value stocks.
 Several alternative asset classes also held up well.
- After hiking interest rates in July to a target range of 5.25-5.5%, the Fed paused in September, and kept the door open to future rates hikes to continue taming inflation.
- What many considered to be an inevitable recession in 2023 has yet to materialize. Inflation has cooled off steadily and unemployment has remained low.
- Some mixed economic signals are present, however, with the recent decline in job openings as well as the first hints of softening consumer spending.

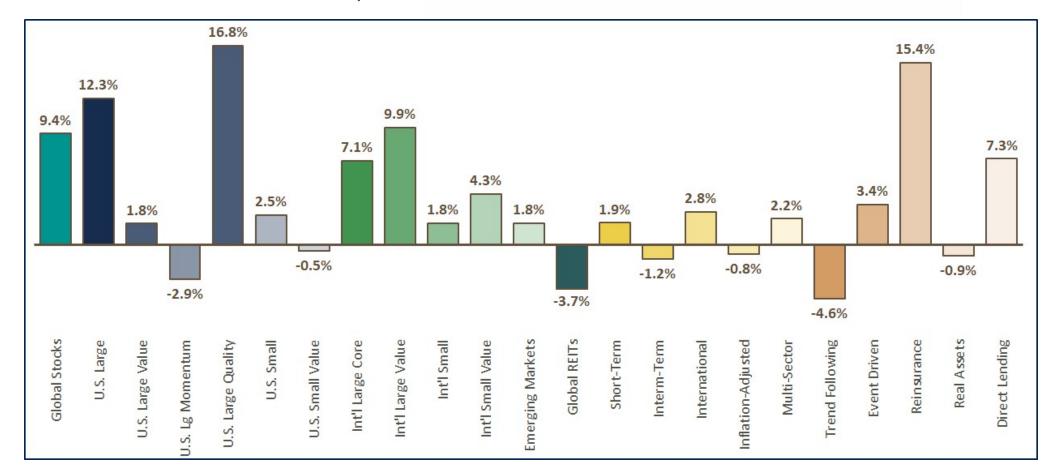

Last 3 Months

• Global stocks and bonds declined during the quarter and few segments of the market were spared from the pain, such as international value stocks, short-term bonds, and several alternative asset classes.

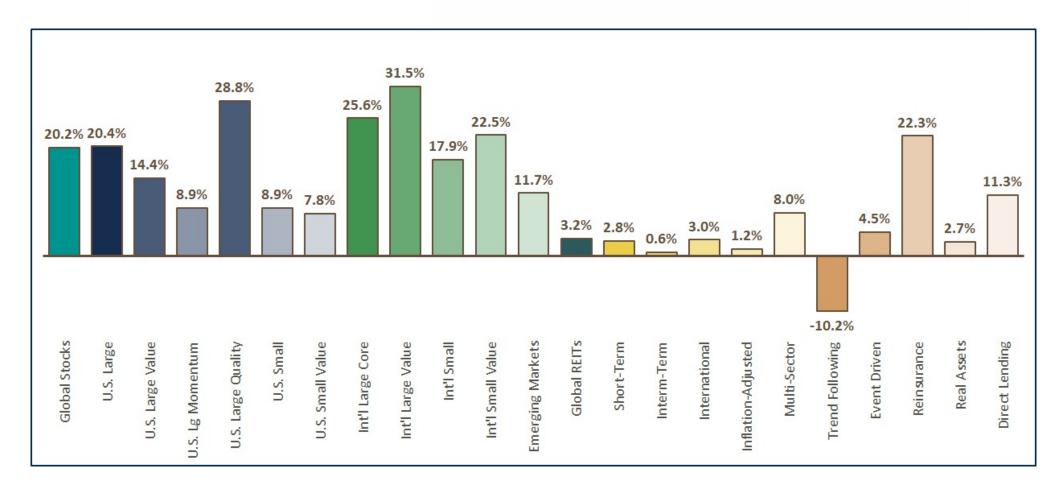

Year-To-Date

• Despite the Q3 pullback, global stocks were still positive YTD with wide dispersion between stock segments. Bond returns were mixed and several alternatives generated favorable contributions to portfolios.

Last 12 Months

Stock returns over the past year had the largest positive impact on portfolio returns.
Alternative asset classes, such as direct lending and reinsurance, also fared well. Bond returns, are modestly positive over the past year.

Economy

- The Leading Economic Index (LEI) marked its 18 consecutive monthly declines with the latest drop driven by lower confidence in business conditions and lower manufacturing new orders.
- Economic growth (GDP) remains muted at +2.1% for the latest annualized report.
- The low unemployment level
 (3.8%) is stable, while wage
 growth has moderated. Other
 measures, such as job openings
 and quits, have declined from
 highs.

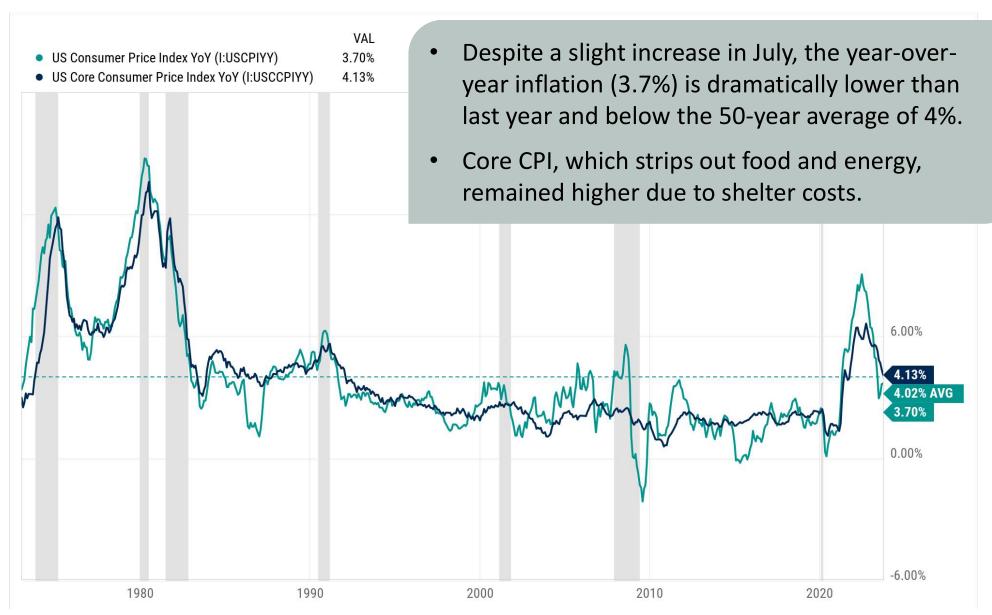

Data as of 9/30/2023. Data sources: Morningstar Direct, FRED, The Conference Board's LEI.

The Taming of Inflation Continues

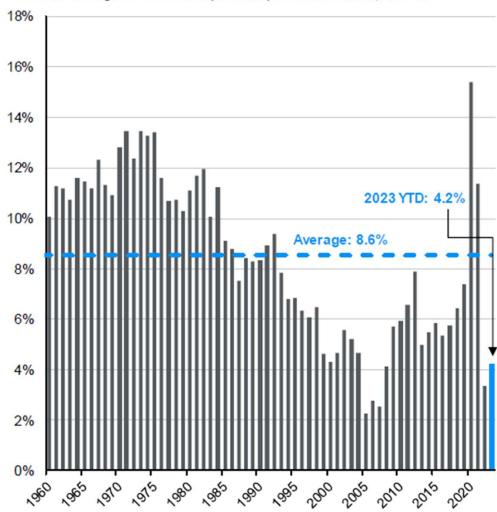

Source: YCharts. Date range: 1/1973 - 9/2023

Consumer Saving and Borrowing in Check

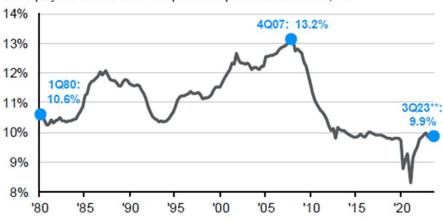

Personal saving rate

Personal savings as a % of disposable personal income, annual

Household debt service ratio

Debt payments as % of disposable personal income, SA

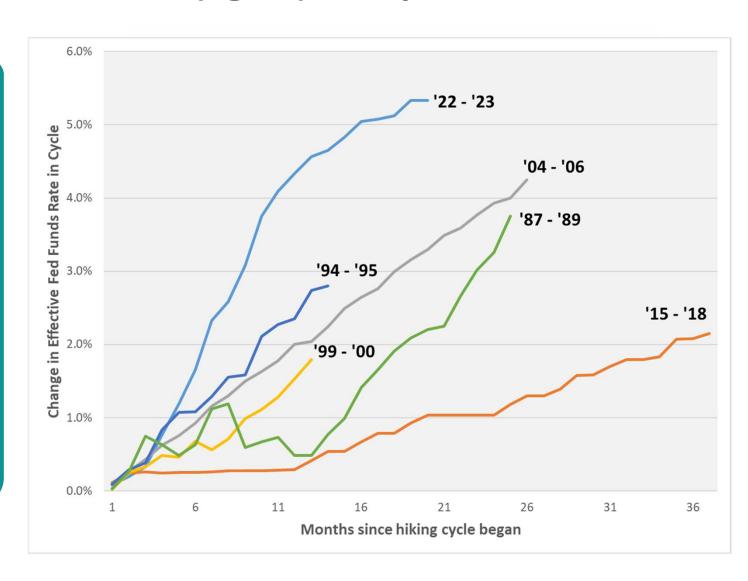

- Americans generally have healthy balance sheets, but the debt service ratio has risen.
- Furthermore, Q3 data on consumer spending showed first hints of softening.

Source: BEA, Federal Reserve, J.P. Morgan Asset Management. From March 2020 to August 2021, consumers amassed a peak \$2.1 trillion in excess savings relative to the pre-pandemic trend. Since August 2021, consumers have drawn down on those excess savings.3Q23 figures for debt service ratio are J.P. Morgan Asset Management estimates. *Guide to the Markets – U.S.* Data are as of Sept 30, 2023.

The Fed Hit Pause (again) in September

- After 11 rate
 hikes, the Fed
 paused on its
 most aggressive
 rate hiking in
 modern history.
- The end of this cycle may be near, but it will be data dependent in the coming quarters.

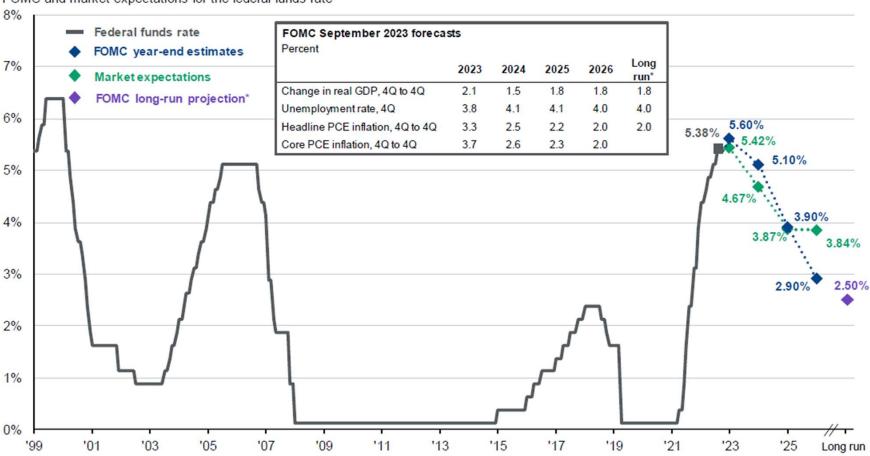

Source: FRED (Federal Reserve). Data illustrates the change in the Federal Funds rate since hiking began using the Effective Federal Funds Rate (monthly average). Data as of 10/3/23.

Beyond 2023, Rates are Expected to Move Lower

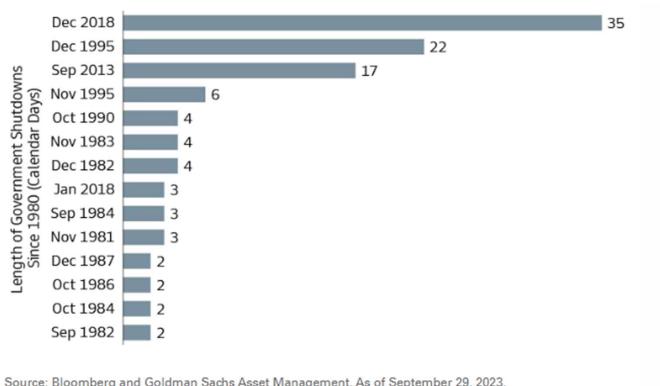

Federal funds rate expectations

Source: Bloomberg, FactSet, Federal Reserve, J.P. Morgan Asset Management. *Guide to the Markets – U.S.* Data are as of Sept 30, 2023. Market expectations are based off of the respective Federal Funds Futures contracts for December expiry. *Long-run projections are the rates of growth, unemployment and inflation to which a policymaker expects the economy to converge over the next five to six years in absence of further shocks and under appropriate monetary policy. Forecasts are not a reliable indicator of future performance. Forecasts, projections and other forward-looking statements are based upon current beliefs and expectations. They are for illustrative purposes only and serve as an indication of what may occur. Given the inherent uncertainties and risks associated with forecasts, projections or other forward-looking statements, actual events, results or performance may differ materially from those reflected or contemplated.

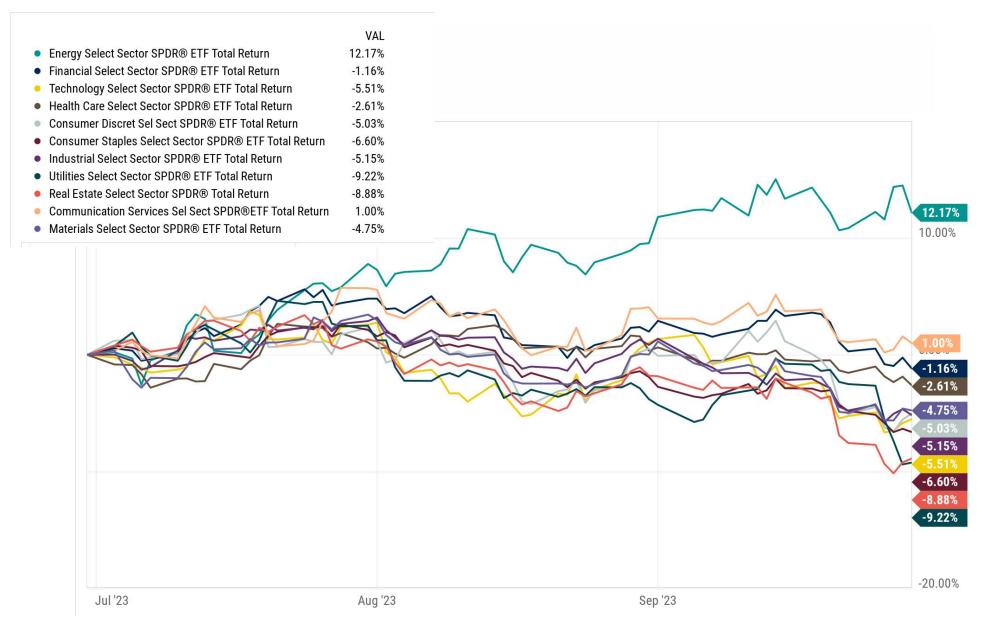

Shutdown Showdown

Source: Bloomberg and Goldman Sachs Asset Management. As of September 29, 2023.

- Since 1980, gov't shutdowns have lasted 4 days, on median. Estimates by Goldman Sachs, are a -0.2% impact on annualized growth for each week a shutdown lasts.
- Historical market impacts have been muted since 1980, the S&P 500 delivered a median return of 0.75% during gov't shutdowns.

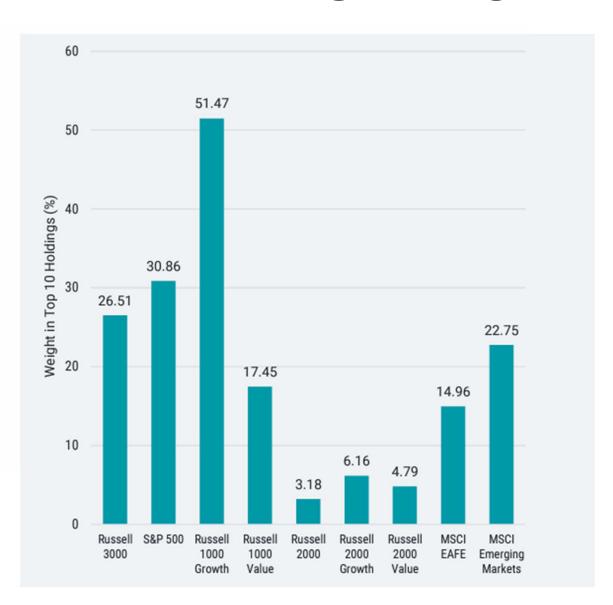

Wide Disparity Between Sectors

Source: YCharts. Date range: 7/1/2023-9/30/2023.

Index Concentration is Greatest Among U.S. Large

- The chart represents the weight of the top 10 stocks in each index.
- U.S. large and large cap growth have increased meaningfully in recent years and the top 10 comprise the highest levels since the start of the century.
- Implication is a small subset of stocks will have a greater impact on return – whether good or bad.
- Diversification beyond these segments helps reduce risk.

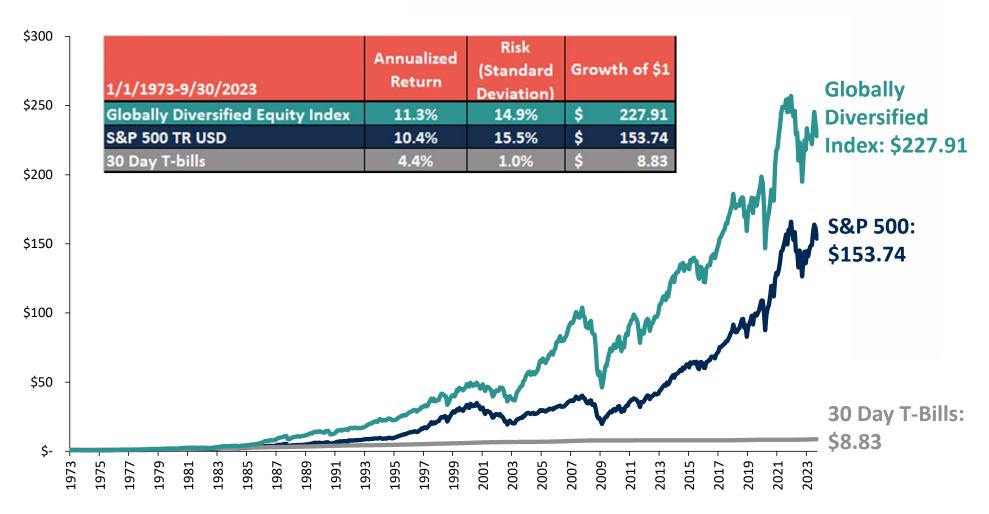

Valuations Beyond U.S. Large are Attractive

Market	Current P/E (NTM)	10 Year Average	Overvalued Undervalued
US Large (S&P 500)	17.8	17.5	+0.3
US Large Growth (Russell 1000 Growth)	24.4	21.8	+2.6
US Large Value (Russell 1000 Value)	13.7	15.0	-1.3
US Small (Russell 2000)	19.2	23.7	-4.5
Int'l Developed (MSCI EAFE)	12.7	14.4	-1.7
Emerging Markets (MSCI EM)	11.8	12.1	-0.3

Source: Eaton Vance Monthly Market Monitor October 2023. Source: FactSet as of 9/30/23. NTM P/E is market price per share divided by expected earnings per share over the next twelve months. Data provided is for informational use only.

Global Diversification Outperformed with Less Risk

Despite outperformance in recent years by U.S. stocks (S&P 500), a globally diversified stock portfolio produced a higher return with less risk over the long run.

Cash is Not Always King

Investment opportunities outside of CDs

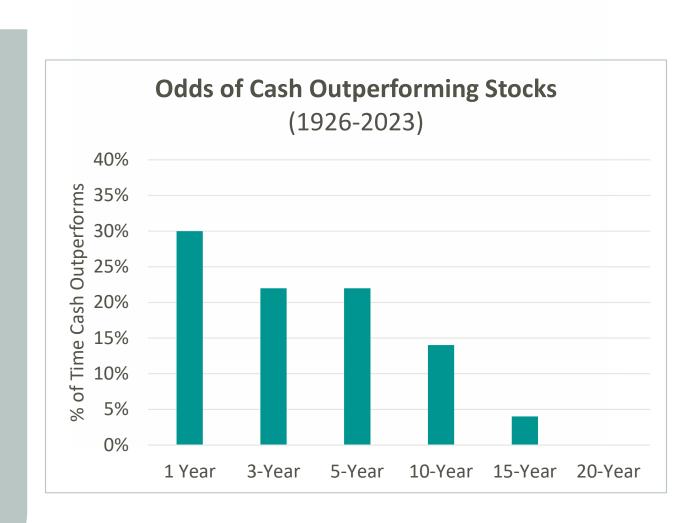

Peak 6-month certificate of deposit (CD) rate during previous rate hiking cycles and subsequent 12-month total returns

Source: Bankrate, Bloomberg, FactSet, Federal Reserve, Robert Shiller, J.P. Morgan Asset Management. U.S. High Yield: Bloomberg U.S. Corporate High Yield Index. The S&P 500 total return figure from the 1984 period was calculated using data from Robert Shiller. The analysis references the month in which the 6-month average CD rate peaked during previous rate hiking cycles. CD rate data prior to 2013 are sourced from the Federal Reserve whereas data from 2013 to 2023 are sourced from Bankrate. CD subsequent 12-month return calculation assumes reinvestment at the prevailing 6-month rate when the initial CD matures. *Guide to the Markets – U.S. Data are as of Sept 30, 2023.*

Opportunity Cost of Sitting in Cash is Huge

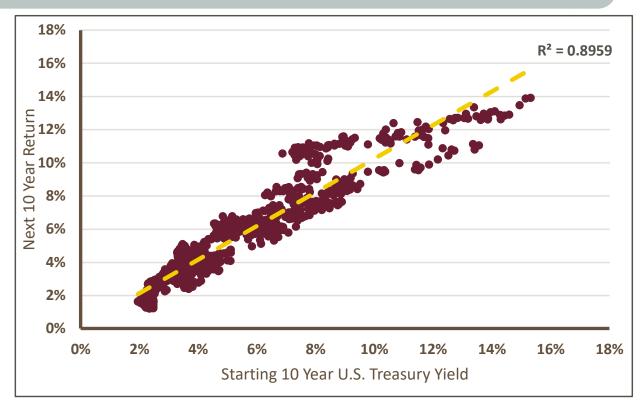

- When stocks are down, it may be tempting to go to cash.
- However, the probability of earning a higher return is small.
- On average, cash beat stocks only 30% of the time over one-year periods.
- As time goes on, the chances narrow significantly ending at 0% over 20 years.

Current Yields are Good Predictors of Returns

- A multi-sector approach to fixed income can offer a much-improved source of future return.
- Starting yields are the primary driver of long-term bond returns as evidenced by the historical data on the bottom right.

Bond Sector	Current Yield (YTW)	
U.S. Aggregate	5.4%	
U.S. IG Corps	6.0%	
MBS	5.6%	
U.S. High Yield	8.9%	

Source: Ycharts, Bloomberg, FactSet, J.P. Morgan Credit Research, JPM Guide to the Markets, 9/30/23. Indices used are Bloomberg. Yield-to-worst is the lowest possible yield that can be received on a bond apart from the company defaulting. Current 10-Year Treasury Yield Regression data as of 12/31/2022. R2 refers to the predictive power a variable has in a regression. A higher R2 (maximum of 1.0) implies a variable is more significant. See Endnote 2 for additional disclosures.

Inflation

- The trend is our friend
- Not out of the woods yet, but we're in final innings of policy tightening
- May take longer than expected to get to 2% target

Economy

- Nothing signaling imminent recession, but growth is slowing
- The "soft landing" few thought possible may indeed play out
- Economic forecasting is hard – the recession has been "six months away" for 18 months

Markets

- Risk-reward tradeoff in bonds has flipped from negative to positive
- The mood has shifted in global stocks as the "higher for longer" rates hovers
- The hardest day to invest is always today

Asset Allocation

- Small cap and international stocks present attractive entry points
- Staying or moving to cash has opportunity costs
- Continued belief in "diversifying your diversifiers"
- Within alts, reinsurance as attractive it's been in decades
